Julien Gaichet

AI & Automation Specialist | Workflow automation, API integrations & LLM agents

Remote | linkedin.com/in/jgaichet | github.com/Julinhio

SUMMARY

I analyse how a business process really runs, then automate it with workflow platforms, APIs, webhooks and LLMs, plus custom code when a platform hits its limits. For almost two years I built and maintained automations, integrations and AI tools for sales, marketing, ops and training teams, and kept them reliable with error handling, logging and monitoring. I work closely with business teams and translate their needs into working solutions on my own. Former EN-FR linguist and QA reviewer (2013–2024).

EXPERIENCE

Process & Automation Specialist (contractor) — Conciergerie Cardin (Letahost, Invest Malin) 01/2025 – 10/2026

- **Call analysis:** pulled calls from the Aircall API, transcribed them and had an LLM qualify them: 11,251 calls down to 32 prospect briefs pushed to the Monday.com CRM, with zero failures.
- **Personalized content:** turned 40,000+ lines of webinar transcripts into a library of testimonial quotes mapped to 5 buyer personas, and matched 92 testimonial videos to each prospect's profile.
- **Recommendations:** webhook-triggered pipeline recommends 3 coaches for each new client. Repeated tests showed one coach kept winning (12 of 25 top spots), so selection moved to a fixed rotation.
- **Voice and AI in the field:** mobile inspection app for field coordinators (600+ property records) with a voice inventory built on Whisper speech-to-text and an LLM.
- **Customer feedback:** automated NPS collection across 10 surveys and two brands, synced to the CRM, with dashboards for leadership and each team member.
- **Production reliability:** coach-payout platform checks 4,400+ sessions every night and sends only doubtful cases to a person; nightly jobs have automatic catch-up and a daily AI health check.
- Cost and delivery: compared models side by side and cut one analysis's cost about 30x at equal quality; Claude Code builds from my specs and Codex reviews each pull request.

EN-FR Translation & Localization — TransPerfect, SDL, freelance (Lionbridge, Leapforce, agencies) 2013 – 2024

- Ran quality assurance on 500+ translations per month for Qatar, Cathay Pacific and AWS.
- Progressed from manual translation to post-editing AI output (MTPE), then to quality review as dedicated French linguist for Cathay Pacific, Radisson and AWS.

INDEPENDENT PROJECTS

AI prospecting radar — Automata (own automation agency) 10/2026

- Built a nightly agent that reads job postings, spots the manual, repetitive work behind them, drafts a problem hypothesis and enriches the best leads in a private dashboard.

AI job radar with two-stage LLM triage 10/2026

- Collects 9,000+ postings a night from 12 sources; a free model triages, then Claude Haiku re-scores and learns from my past accept and reject decisions, for about €0.70 a run.

SKILLS

AI & LLM: LLM APIs (Claude, Gemini, OpenAI, OpenRouter), AI agents, prompt engineering, structured outputs, document processing and PDF generation, Whisper speech-to-text, LLM evaluation

Automation platforms: Make.com (certified), n8n, webhooks, scheduled jobs, CRM automation (Monday.com), Google Apps Script, Airtable

APIs & development: REST and GraphQL APIs, Node.js and Python services built with AI coding agents, SQL (PostgreSQL, Supabase), Git and GitHub, Railway, Vercel

Data & reporting: dashboards, NPS, data reconciliation, deduplication, before/after measurement, cost tracking per LLM call

Reliability: error handling and fallback routes, logging, monitoring and health checks, catch-up runs, budget guards, root-cause fixes closed with tests

EDUCATION

Master's in Oceanography — Université des Antilles 2005

Web Development Bootcamp (JavaScript & Web Design) 2024

CERTIFICATIONS

Make.com Partner Training Level 4 (Advanced) — Make.com 2025

LANGUAGES

French (native), English (professional working proficiency), Thai (spoken)
